

## BEYOND LASIK:

**ICL:** Customised tiny soft invisible permanent Intraocular implants, non laser solutions for vision correction with a high quality and precision. Now also TORIC ICLs available for high cylindrical power correction.

**Epi-LASIK:** For thinner cornea's with high numbers beyond LASIK correction. Epi-LASIK is a similar procedure to LASIK in principle but makes thinner corneal flaps which are just epithelial. Epi-LASIK has the same results as LASIK but the healing is slow, slightly painful, in some cases corneal haze and regression can occur.

## LASIK FOR PRESBYOPES (BEYOND 40yrs):

Essentially monovision LASIK treatment are done making one eye distant dominant, the other eye near dominant. With both eyes open distant and near vision is possible with least dependence on spectacles. The other alternative is to do a presbyopic lens exchange with multifocal lens implantation.

*Beautiful eyes should  
not be kept behind glasses!!!*

## ABOUT US

A super speciality eye hospital spread over 3000 sqft fully air-conditioned, accredited with International standards, well experienced eye professionals and well trained staff. The hospital is equipped with the latest, diagnostics and surgical tools, catering to all kinds of eye problems under one roof.

Dr. Vaishal P. Kenia has been trained under world-renowned eye surgeons such as Prof. H. R. Koch and Dr. Jack Dodick. Attained his I.C.O. (UK) in 1997 & D.N.B. 1998. One of the few early centers in India pioneering to provide, Microphaco cataract surgery with Micro Incision Lens (MIL) implant thru sub 2 mm dot incision.

## SPECIALTIES

- Cataract services
- Cornea services
- Glaucoma services
- Vitreo-retinal services
- LASIK & Refractive services.
- Oculoplasty services.
- Paediatric eye & Squint services.

## SALIENT FEATURES

- Cashless mediclaim & credit card facility.
- Cutting edge technology with live surgical display.
- Convenient online appointment.
- Class service with pleasant ambience
- Computer assisted eye evaluation.
- Counseling & brochures for specific eye disease.
- Customised individualized eye treatment.
- Conduct patient education seminars.
- Corporate tie-ups.

Look better... See better...*

LASIK

## ISN'T IT TIME YOU LEFT YOUR GLASSES AND CONTACTS BEHIND?

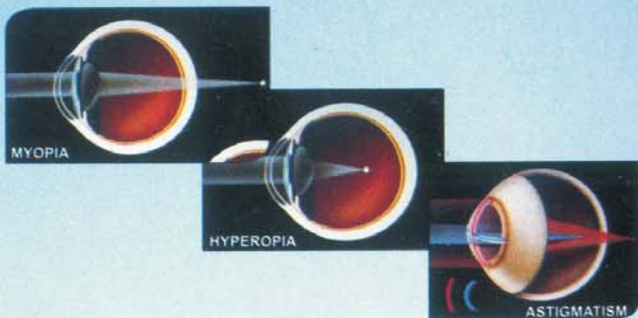

Laser vision correction has enabled millions of people worldwide to enjoy a new found freedom- Living there lives without the inconvenience of glasses or contact lenses.

## WHY SHOULD YOU CONSIDER LASER EYE SURGERY?

Imagine seeing clearly from the moment you open your eyes in the morning! Once you have had vision correction you will see and experience all the freedom that life has to offer. Laser refractive eye surgery will truly change your life.

Whether you are farsighted, near sighted or have astigmatism, Laser eye surgery can eliminate your dependence on glasses or contact lenses.

Once you have a vision correction procedure your natural vision will be restored. Gaining the freedom and security you want is actually quite easy. Laser vision correction is a pain free procedure that takes only 10 minutes and is approximately 60 seconds of laser time per eye in most cases.

## LASIK PROCEDURE:

Eye is anaesthetised in the form of eyedrops. Your eye is numbed while fixation ring is placed upon the eye to stabilize it.

Step 1

A Microkeratome – is used to create a thin corneal flap which remains hinged through the procedure.

Step 2:  
Flap Creation

Step 3:  
Laser Correction

Step 4:  
Flap Gently replaced

The corneal flap is then laid back and the inner stromal layers of the cornea are "Lasered" with a excimer laser to reshape the inner layer of the cornea without damaging the surface.

The flap is then replaced without the need for stitches, the entire LASIK procedure takes 10 minutes.

## TYPES OF LASIK VISION CORRECTION:

**CONVENTIONAL LASIK:** Its corrects only spectacle number but does not correct any other distortion.

**OPTIMIZED LASIK:** Its corrects spectacle number and optimised correction of distortions to maintain a prolate natural like cornea, thus giving better vision at night and dim illumination.

**CUSTOM LASIK:** Its corrects spectacle number and the optical distortion. These distortions are measured in a wave form with a aberrometer which is extremely precise. Individualised customised wavefront guided vision correction outcomes achieved are far superior then conventional or optimised lasik surgery.

## PRE-LASIK EVALUATION

Prior to LASIK vision correction surgery, we will perform a comprehensive eye exam to ensure that you are a good candidate for treatment. Individualised eye data is then analysed and the best treatment modality is decided. providing you with the clearest visual results possible. The Pre-LASIK vision correction evaluation include:

- Refractive error measurement.
- Corneal topography map
- Pupil & corneal thickness measurements..

- Dilated examination for retinal evaluation.
- Discussion of medical history, lifestyle, and expectations

U. S. FDA approved Allegretto Excimer Laser  
With topography and wavefront link for custom LASIK

- Safe
- Precise
- Fast Recovery
- Painless
- Superior Results
- Consistent Results
- Proven Treatment

## POST LASIK CARE:

- Get back to your routine the next day after LASIK, follow the post LASIK instructions and medications as scheduled.
- Wear protective eyewear outdoors for a week.
- Avoid eye makeup after LASIK, for a week.
- Avoid contact sport and swimming for a month.
- Do make an appointment with your LASIK doctor for a follow up.

are you  
ready for  
freedom?
